

THERMAL PRINTING OPTIONS

Printers are not a “one size fits all” item.

The style and model of printer you need will depend on a variety of things. That’s where we come in. Let us know what items you are planning on printing now, and what you may consider printing in the future as well. This way we can make the best recommendation for today’s needs, as well as tomorrows.

How to match up the printer with the materials?

When looking at the materials in this booklet, look at the **Printer Option** tab at the far right of the page. This will show you which printer option will perform the best for the materials listed.

OVERVIEW OF PRINTERS

Printer Option #1

The Sato CL4NX

The NX Series represents SATO's next generation of thermal printers with advanced support for barcode symbologies, character sets and RFID encoding. The NX Series incorporates value-added features in a world-class design to deliver a printing solution that goes beyond expectations.

Printer Option #2

The Zebra line of printers are the workhorse of the industry. The Zebra printers are very versatile and can print a large variety of adhesive labels, tag stocks, and thinner mil stakes. The Zebra printers are great for the high volume printing needs.

Printer Option #3

The Tharo line of printers are a very economical option for a great entry-level printer. This is a great fit for small to mid-sized printing volumes. These also come with a free Start software program.
